Reclaim Your Time

Automation Made Simple

Lawson's Ajax In-Line Screen Reclaimer improves screen quality and increases shop production by automating the screen reclaim process. Engineered for simplicity, the Ajax-R reduces labor costs and minimizes employee exposure to chemicals. It helps maintain a clean and safe working environment since all chemicals and liquids are enclosed and circulated through Lawson's environmentally friendly closed-loop system.

Automated reclaiming provides consistency throughout the day by eliminating variables such as operator attention deficit issues, operator fatigue, inadequate training, and the inconsistent application of standard operator procedures.

Lawson's exclusive pinch roller, single motor drive system is simple, reliable and requires little to no maintenance. The spring loaded pinch roller drive system automatically adjusts to various frame profiles and frame size. The clear front viewing panel allows easy viewing as screens are cleaned.

It is time to Reclaim Your Time. Join the Automation Revolution.
